Jeff, I will have the team send you the line of code for your testing purposes.

The embedded viewer will be a test viewer since we are polishing up content. Once we feel like we have a final draft we will replace a line of code and perform the final check with you guys.

If I can offer a technical suggestion, best is to provide a simple code to post, like a iFrame. The map viewer we posted yesterday embedded the map in an iFrame tag, which worked fine.

Best to avoid having to upload support files, external javascript or xml calls, or CSS .classes. The EPA Web CMS disables those, or makes them difficult to work around.

Give us an hour to work out some minor issues. I would like to set up a call before we pass over any code.

Dan,

Based on the conference call with Eric Delgado, Marty McComb, and myself I am codifying some of the points we discussed.

The OPS viewer url and login info is below. This viewer is a more robust version of the Public Version.

user=

pass=

The tentative timeline for the viewer will be tomorrow morning for a slimmed down version of the Public Viewer by tomorrow morning. It will contain locations and data displayed that have been submitted to HQ in the three links – trend graphs, analytical link, and water quality. The tool, SADIE, that is in the OPS viewer is going to be replaced with a webpage based analytical report. Over the course of a few days (possibly by Monday) we will finish QC'ing the latest monitoring data and working through the data differences between the three regions.

Eric/Marty/Janine,

If there is anything you want to add or about this please chime in.

Thanks everyone,

Dan
